

# HOW TO CARE & MAINTAIN YOUR HIDEAWAY® BIN (all models)

NOTE:

**NOTE: Diagrams indicating the different bin components can be found in the downloadable installation instructions for each bin model. This is located in the 'DOWNLOADS' section of our website.**

## How to remove the friction-fitted lid from a Hideaway Deluxe or Hideaway Soft Close Bin (for cleaning)

NOTE: Hideaway Compact Bin models DO NOT have removable lids.

- **If you have a Deluxe model:** First, fully extend the runners, remove the buckets from your unit. The Deluxe range has black levers on either side of the runners. Push the left lever up and the right lever down. Pull the runners clear of the unit and set aside in a safe place. This will allow more access to the back of the unit (be sure to push the inner runners back inside the unit).
- **If you have a Soft Close model:** remove the buckets from your unit. The Soft Close range do not have levers.
- **Both ranges:** you need to clear the lugs at the back of the lid. Place your hands at the back of the lid on either side and then push up and pull forward in the same motion. This will release the lid. Remove the lid clear of the main unit. This will then allow you to clean the lid.

## How to reinstall the friction-fitted lid and foam into the top mounting panel of your Hideaway Deluxe or Hideaway Soft Close Bin

- Rest the foam on top of the friction-fitted lid. NOTE: the plastic sleeve stays on the foam to protect it.
- Slide the friction-fitted lid and foam inside the top mounting panel, stopping just before the rear hooks. NOTE: the large fold on the friction-fitted lid sits at the front of the unit, the rear of the lid has the slots which reconnect with the hooks located on the top mounting panel.
- Simultaneously, with one hand, push firmly up on the back of the friction-fitted lid, push the lid above the hooks and drop into location. Whilst this is happening, with the other hand push the front of the lid upwards to ensure it rests on the metal support - located at the front of the top mounting panel.
- The lid should move up and down slightly, with ease indicating correct installation.

## How to care for, remove and replace runners for cleaning

### To remove runners (Hideaway Deluxe and Hideaway Compact Bins only):

- Fully extend the runners. To do this, find the black levers located on the outer side of both the left and right runner.
- Simultaneously, push the left lever down and the right lever up and pull inner of the runners towards you until it separates completely from the unit. Set runner inner with collar, handle/door bracket attached aside in a safe location.
- Push the outer runners attached to the top mounting panel back inside the unit.

### To separate runners for cleaning (Hideaway Deluxe and Hideaway Compact Bins only):

- Ensure the outer runners attached to the top mounting panel are pushed all the way inside the unit. With the outer runners, ensure the inner slider is pulled all the way towards the front of the unit.
- Wipe runners with a clean cloth, cotton bud or toothbrush. Apply a small amount of petroleum jelly, such as Vaseline, to the runners.
- Line up the inner runners (with collar attached) to the outer runners that are attached to the top mounting panel (which is now installed in your cupboard).
- Push the inner runners all the way in until the unit closes to engage the runners. Pull unit

open again. The runners should move with ease indicating correct positioning.

#### **To care for your runners (all bin models):**

- Over time you may need to lubricate your runners for continued free movement. To do this, lube with a small amount of petroleum jelly, such as Vaseline.
- Your Hideaway Bin has ball bearing runners which gain a memory over time. To ensure your bucket/s will always come clear of your bench top, every so often place a firm grip on either side of your handle/door bracket and slowly, but firmly, pull the unit towards you. Continue to pull the runners towards you until they reach their maximum extension. Then close your unit fully again.

#### **How to keep your Hideaway Bin clean**

- It is recommended you use warm soapy water to clean your Hideaway Bin.
- Avoid harsh abrasive cleaners.
- When cleaning, try to avoid getting the runners wet, however, if this happens ensure you dry the runners well and then regrease with a small amount of petroleum jelly, such as Vaseline.

#### **Important information:**

- Do not over fill your bin as contents could scratch your friction-fitted lid.
- Refrain from pushing down on rubbish inside your bucket/s as this creates extra pressure on the fixings inside your carcass.

**Replacement parts for your Hideaway Bin can also be purchased online!**
